

Project Title

Heru Purnama Website

Year Accomplished
2025

Role/Position

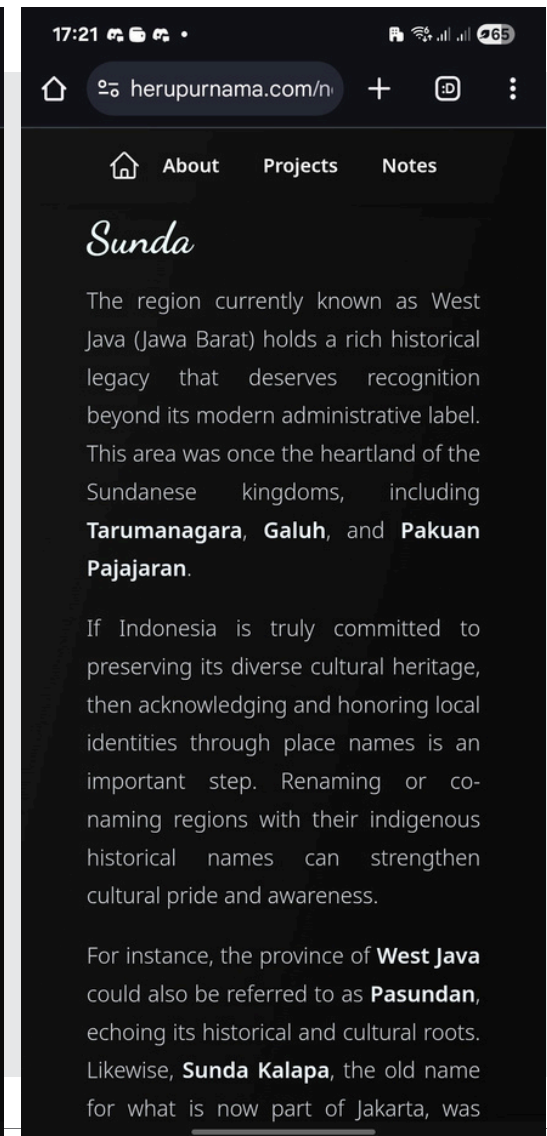

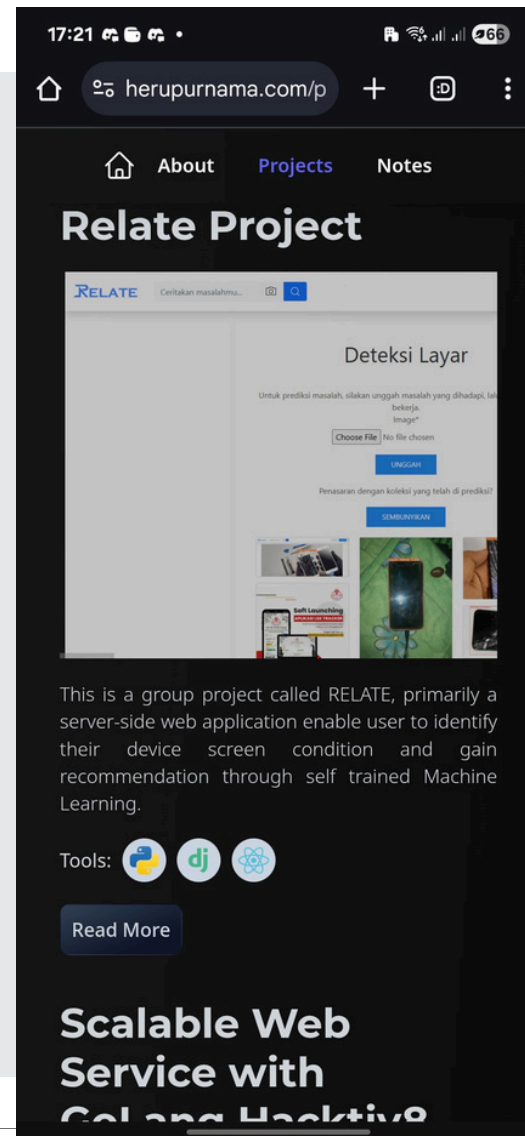

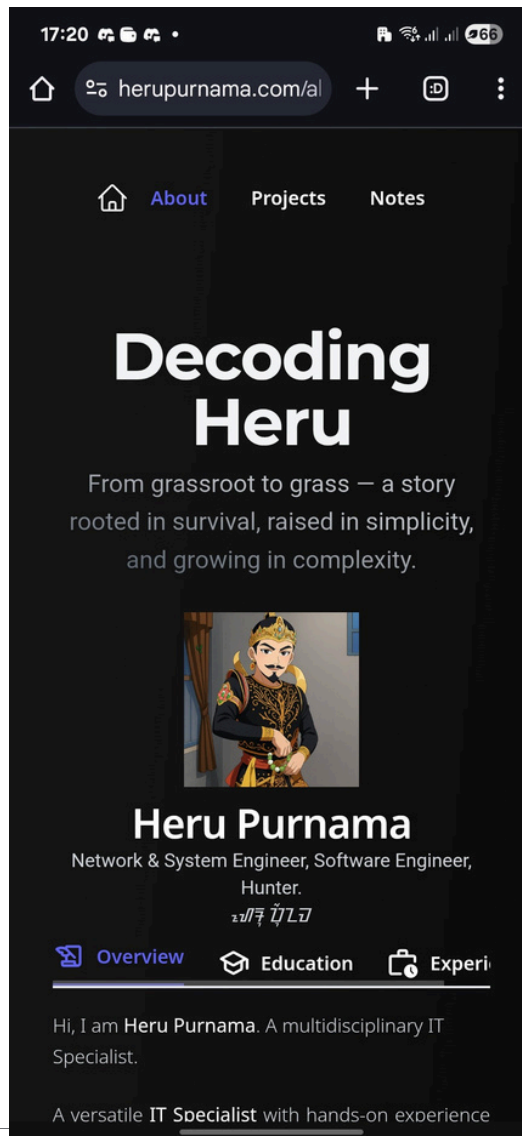

Developer

Publication Link
herupurnama.com

Description

HeruPurnama.com is my first in-depth frontend project, a personal portfolio website built with Vite, Tailwind CSS, and Vue.js to showcase my projects, ideas, technical notes, and personal growth across multiple fields. It's designed for fast, lightweight development and focused on storytelling—reflecting my commitment to learning, building with purpose, and bringing my ideas to the world.

RELATE - Orbit AI Academy Group Project

2022

Leader,
FullStack
Developer

herupurnama.com/short-cut/relate-project

Description

RELATE is a group project that uses Django, UI-Kit, YOLO, and React-based NLP to help users detect phone screen damage and find nearby repair services. I was responsible for integrating all technical components into one seamless responsive web application.

IoT Project

Year Accomplished

2023

Role/Position

Developer

Publication Link

herupurnama.com/short-cut/smart-home

Description

This IoT project enables communication between microcontrollers using API or MQTT over WiFi or Sim800L. It collects data like humidity, keylog, GPS coordinates, and altitude, sends it to a middleware connected to Supabase, and bridges communication to a Telegram bot—overcoming TLS compatibility issues with Sim800L.

Project Title

KKN Community Service

Year Accomplished
2022

Role/Position

Leader

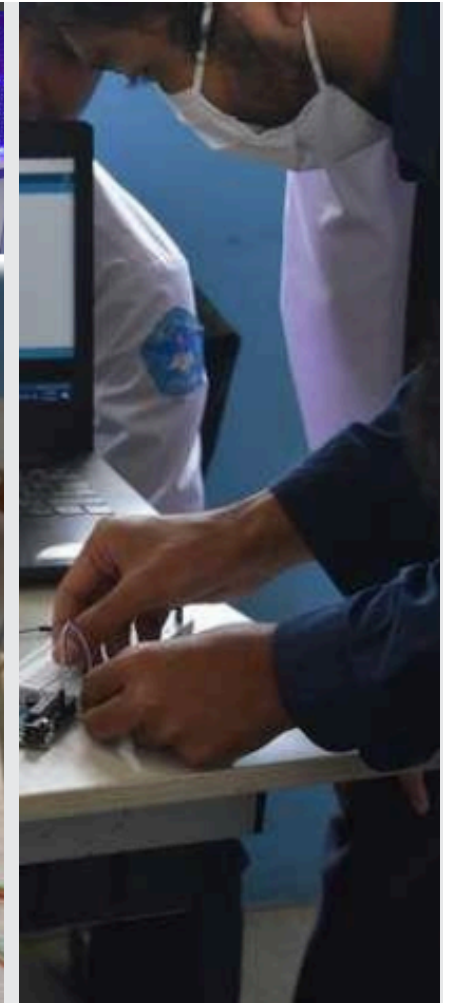

Publication Link

herupurnama.com/short-cut/kkn

Description

Led a multidisciplinary team to promote digital literacy in the community, focusing on cybersecurity and the use of technology. A key highlight was my article on Kompasiana, titled "Cara Mengamankan Diri di Dunia Digital," which received over 28,989 views. I also took initiative to merge and design a collaborative book chapter involving contributions from 31 participants.

Project 4 of 5

Description

This research project demonstrates that raw firewall rules in Mikrotik offer better performance than filter rules, saving up to 28% of CPU load by using raw drop. The evaluation was conducted using the TOPSIS multi-criteria decision-making method to assess efficiency and effectiveness across different configurations.
